

“The New OCP Black” - the best black you can print!

The ongoing development of the inkjet technology and the steadily growing printing volume in companies and private households continuously increase the requirements for aftermarket inks.

Now the time has come!

A new generation of OCP pigment inks with outstanding product features offers - beneath the already known OCP stability - further quality characteristics, which preliminary aftermarket inks are not able to show. These features are especially:

1. An excellent low “intercolor bleeding” - that means: bleeding between color inks and OCP’s innovative pigment inks is not noticeable, maybe verifiable by measuring equipment.
2. The improved optical density is ensuring deep black printouts, which are not ranking behind the OEM, respectively they are partly over topping the OEM printouts.
3. A high resistance against highlighters - after some minutes inkjet prints would not be interferingly smudged by customary highlighters. The resistance is compareable to laser prints.
4. A very high paper independence - this means: the printout quality does not depend noticeable on the quality standard of the used paper or printing media any more by using the new OCP pigment inks. Even upon plain, bluntly fibrillar 70gr papers the previously mentioned features such as high optical density and lowest intercolor bleeding are unrelievedly existing.

In the following you will find a survey about the OEM cartridges, the new generation of inks has been developed for and an assignment of the regarding inks to the cartridges:.

The inks presented here already had been tested and already are available!

OEM cartridge	“The New OCP Black”
HP 51645 (No 45)	IJ BKP 245
HP C6615 (No 15)	IJ BKP 245
